Elcomp / Hofacker ATMAS Editor and Macro Assembler program with free program descriptions and book (114 pages). This is one of the most powerful Editor / Assemblers for 8 bit Atari Computers. The Editor is fully screen oriented and can be used as a word processor, too. Assembly can be started directly from the Editor. The Assembler interprets all existing opcodes of the 6502 language set as well as a few pseudo opcodes. It translates 12K of source code in about 5 seconds. Only runs on the Atari 800 Computer.
