

Adr	Hex	Name	Description	OS
754	\$02F2	CH1	prior key pressed	all

Prior keyboard character code (most recently read and accepted). This is the previous value passed from [CH](#) (764/\$2FC). If the value of the new key code equals the value in CH1, then the code is accepted only if a suitable key debounce delay has taken place since the prior value was accepted.
