Some nice USB Devices for small Computers#

USB VGA Graphic Card

[USB VGA Graphic Card](#)

A Japanese company is selling graphics adapters intended for USB 2.0 bus.

Telegnosis; USB 2.0 VGA adapter allows to display 640x480, 800x600 and 1024x768 resolutions with 8/16/32-bit color depth, the target market for the product seems to be business-oriented customers who need some additional capabilities from their notebooks or desktops.

It is not clear which graphics processor is used in Telegnosis' device. Keeping in mind the small size of the adapter, it is likely that the USB 2.0 VGA is powered by a mobile graphics processor with embedded memory.

This seems to be the same product in a different box. It can be found [here](#). According to [this site](#) it is built around the SiS315 graphic chip. A Linux driver exists, so why not Atari? ;-)

USB Remote Control#

[ATI Remote Wonder](#)

[The Unofficial RW Page](#)

Certainly some games could be played with it and I believe it can be also put into some practical use.

USB Flash Stick [#](#)

Q: What about access to one of the often used USB Flash Storages?
 e.g. the Kingmax USB 2.0 128MB. -- Main.RalfPatschke - 11 Aug 2004

A: USB 2.0 might be to much Software Driver overhead for a small machine, but USB !! might be possible. We're already investigating. As always, help in getting the knowlegde in USB UFI mass storage driver programming is appreciated.
