

Adr	hex	Name	description	OS
730	\$02DA	KEYREP	rate of key repeat	XL/XE

The rate of the repeat; default is 6, which means ten characters per second (one each six VBLANK intervals after the delay above). POKE with the number of VBLANK intervals between repeats; with a value of 1, you get 60 characters per second (50 on PAL systems)! A value of 0 provides one key repeat only per press.
