

ADR	HEXADR	NAME	Description	OS
58463	\$E45F	SYSVBV		both

Stage one VBLANK calculations entry. It performs the processing of a VBLANK interrupt. Contains JMP instruction for the vector in the next two addresses (58464, 58465; \$E460, \$E461). This is the address normally found in VVBLKI (546, 547; \$222, \$223). It is initialized to 59345 (\$E7D1), which is the VBLANK routine entry. Initialized to 59345 (\$E7D1) old ROMs, 59310 (\$E7AE) new ROMs.
